# GAR2013 products

---

- The Pocket GAR provides the main evidence and messages of the report in a concise, easy-to-use format.
- The main report contains enhanced content links which provide access to dynamic maps, videos, photos, and case studies for users with smartphones and tablets.
- Tablet computer and smartphone users can also enjoy the GAR for Tangible Earth (GfT) free application. GfT, or “gift”, is a fully interactive stand-alone application, which features a 3D globe interface that contains decades of dynamic earth science data sets, including disaster events from all GARs. These data sets are illustrated with interactive risk scenarios, maps, and photos and are searchable by time (including real-time), place, risk driver, hazard, disaster event, and more.
- GAR2013 is also available as a fully interactive web version, with much of the functionality available in products such as:

The main report (PDF) in French, Spanish and Arabic

Interactive main report in English

Appendices

Background papers

Interim national progress reports on the implementation of the Hyogo Framework for Action

Access to disaster loss and risk databases
