## Europe and Central Asia

Indicator	Year	Value	Indicator	Year	Value
Population (million people) <sup>1</sup>	(2013)	60	GFCF - Gross Fixed Capital Formation (million US\$) <sup>1</sup>	(2013)	357.422
Population density (People/km <sup>2</sup> ) <sup>1</sup>	(2013)	203,4	Social expenditure (million US\$) <sup>3</sup>		664.862
GDP-Gross Domestic Product (million US\$) <sup>1</sup>	(2013)	2.071.307	Gross savings (million US\$) <sup>1</sup>	(2012)	382.961
GDP per capita (US\$) <sup>1</sup>	(2013)	35.926	Total reserves (million US\$) <sup>1</sup>	(2013)	50.775
Capital stock (million US\$) <sup>2</sup>	(2014)	8.604.332			

### Risk drivers

Hazard Exposure			Urbanization		
Population growth (annual %) <sup>1</sup>	(2013)	0,49	Urban population growth (%) <sup>1</sup>	(2013)	0,7
GFCF (% GDP) <sup>1</sup>	(2013)	17,3	Pop living in slums (% of urban pop) <sup>5</sup>		0
Poverty and inequality			Environment		
GINI Index (0 - 100) <sup>1</sup>	(2000)	36,0	Urban population (%) <sup>1</sup>	(2013)	68,7
Life expectancy at birth (years) <sup>1</sup>	(2012)	82,9	Ecological footprint (global hectares per capita) <sup>6</sup>	(2007)	4,99
Pov gap at national poverty lines (%) <sup>1</sup>		0,00	Environmental performance index (0 - 100) <sup>7</sup>	(2014)	74,4
Social expenditure (% GDP) <sup>3</sup>		32,10	Forest change (% - 2000-2012) <sup>7</sup>	(2012)	-0,6
Governance indicators			Climate change		
Rule of law (-2.5 - 2.5) <sup>4</sup>	(2013)	0,36	Freshwater withdrawals (% of internal resources) <sup>1</sup>	(2002)	24,9
Government effectiveness (-2.5 - 2.5) <sup>4</sup>	(2013)	0,45	Electricity production from renewable energy (% total) <sup>1</sup>	(2012)	16,25
Voice and accountability (-2.5 - 2.5) <sup>4</sup>	(2013)	0,93	CO2 emissions (metric tons per capita) <sup>1</sup>	(2010)	6,85
Control of corruption (-2.5 - 2.5) <sup>4</sup>	(2013)	-0,04			

## HFA progress

## DISASTER RISK<sup>a</sup>

### Average Annual Loss (AAL)<sup>b</sup> by hazard

Hazard	Value [million US\$]	AAL/Capital stock [%]	AAL/GFCF [%]	AAL/Social expenditure [%]	AAL/Total reserves [%]	AAL/Gross savings [%]
Earthquake	9.772,86	0,11	2,73	1,47	19,25	2,55
Cyclonic Wind	0,00	0,00	0,00	0,00	0,00	0,00
Storm Surge	0,00	0,00	0,00	0,00	0,00	0,00
Tsunami	1,47	0,00	0,00	0,00	0,00	0,00
Volcano	0,00	0,00	---	---	---	---
Flood <sup>10</sup>	777,37	0,01	0,22	0,12	1,53	0,20
<b>TOTAL</b>	<b>10.552</b>	<b>0,1</b>	<b>3,0</b>	<b>1,6</b>	<b>20,8</b>	<b>2,8</b>

## Risk and Development

### Implications<sup>11</sup>

### Multihazard AAL results by sector (Earthquake and cyclonic wind)

Sector	Sub Sector	Capital stock [million US\$]	Average Annual Loss (AAL) [million US\$]
Residential (income) <sup>12</sup>	Low	4.928	0,68
	Middle low	88.701	70,39
	Middle high	387.491	416,33
Services	High	6.506.534	7.510,35
	Commercial	643.306	713,83
Education	Industrial	553.442	614,00
	Private	14.019	4,21
Health	Public	234.324	237,88
	Private	1.770	0,05
Public buildings	Public	5.408	0,79
	Private	205.862	204,36
National		8.645.784	9.772,88
Fiscal <sup>13</sup>		450.522	443,71

## Probable Maximum Loss - PML<sup>14</sup> (million US\$)

Hazard	Mean return period (years) <sup>15</sup>				
	100	250	500	1000	1500
Earthquake	97.000	157.836	212.653	273.286	316.387
Cyclonic Wind	0	0	0	0	0
Storm Surge	0	0	0	0	0
Tsunami	1	17	48	139	257

# DISASTER LOSSES<sup>17</sup>

## INTERNATIONALLY REPORTED LOSSES

### Mortality

- Alluvion
- Electric Storm
- Flash Flood
- Avalanche
- Eruption
- Flood
- Earthquake
- Fire
- Forest Fire

### Total damages ('000 US\$)

- Avalanche
- Drought
- Erosion
- Coastal erosion
- Earthquake
- Eruption
- Cyclone
- Electric Storm
- Fire

### 10-year moving average

2005 - 2014

DataCards	71
Deaths	21.013
Economic Losses	56.652.463

### Volcano exposure

Number of volcanoes	14
Population living within 30km in country (Pop30)	8.363.679
% of pop living within 30km	14

- 8 UNISDR Global Risk Assessment 2015. This section is based on technical countries risk profiles : World summarized catastrophe risk profiles: summary by country on the results from the Global Risk Model, CIMNE&INGENIAR (2015).
- 9 AAL: The Average Annual Loss is the expected loss per annum associated to the occurrence of future perils assuming a very long observation timeframe. It considers the damage caused on the exposed elements by small, moderate and extreme events and results a useful and robust metric for risk ranking and comparisons.
- 10 AAL Flood results are provisional. These results give an overview of the risk associated with river flooding. Factors other than the depth of the water also have a considerable influence on loss, which means that there is greater uncertainty compared with other hazards.
- 11 Risk and development implications index. This index is useful to provide a ranking of the countries based on the ratio of the expected Average Annual Loss (AAL) with relation to a set of relevant macroeconomic, financial, and social development variables. It attempts to reveal the weight of the AAL with respect to the social expenditure, the capital formation (domestic investment) and reserves (financial capacity), and the produced capital or capital stock (assets at risk) and savings (treasury) of each country. It reflects, in adverse conditions, growth and social constraints for the country as a result of potential future disasters.
- 12 The fiscal portfolio is composed by the government buildings, public education and health buildings, and low income residential private buildings.
- 13 PML: The Probable Maximum Loss (PML) is a risk metric that represents the maximum loss that could be expected, on average, within a given number of years. PML is widely used to establish limits related to the size of reserves that, for example, insurance companies or a government should have available to buffer losses: the higher the return period, the higher the expected loss. PML always have associated a mean return period.
- 14 Mean return period of 100, 250, 500, 1000 and 1500 years means the 5%, 2%, 1%, 0.5% and 0.3% probability respectively of exceeding those losses in 5 years.
- 15 Residential buildings are classified according to the population by income level, using the GINI curve for income distribution and the countries classification limits from the World Bank. See CIMNE et al. 2013a
