

SAINT VINCENT AND THE GRENADINES

LAC

BASIC COUNTRY STATISTICS AND INDICATORS

| | | | | | |
|---|--------|-------|--|--------|-----|
| Population (million people) ¹ | (2013) | 0 | GFCF - Gross Fixed Capital Formation (million US\$) ¹ | (2012) | 176 |
| Population density (People/km ²) ¹ | (2013) | 280,4 | Social expenditure (million US\$) ³ | | 37 |
| GDP-Gross Domestic Product (million US\$) ¹ | (2013) | 726 | Gross savings (million US\$) ¹ | (2012) | -46 |
| GDP per capita (US\$) ¹ | (2013) | 6.486 | Total reserves (million US\$) ¹ | (2013) | 135 |
| Capital stock (million US\$) ² | (2014) | 2.645 | | | |

Risk drivers

| | | | | | |
|--|--------|------|---|--------|------|
| Hazard Exposure | | | Urbanization | | |
| Population growth (annual %) ¹ | (2013) | 0,00 | Urban population growth (%) ¹ | (2013) | 0,7 |
| GFCF (% GDP) ¹ | (2012) | 24,2 | Pop living in slums (% of urban pop) ⁵ | | 0 |
| Poverty and inequality | | | Environment | | |
| GINI Index (0 - 100) ¹ | | 0 | Urban population (%) ¹ | (2013) | 49,8 |
| Life expectancy at birth (years) ¹ | (2012) | 72,4 | Environment | | |
| Pov gap at national poverty lines (%) ¹ | | 0,00 | Ecological footprint (global hectares per capita) ⁶ | (2007) | |
| Social expenditure (% GDP) ³ | | 5,13 | Environmental performance index (0 - 100) ⁷ | (2014) | |
| Governance indicators | | | Climate change | | |
| Rule of law (-2.5 - 2.5) ⁴ | (2013) | 0,86 | Forest change (% - 2000-2012) ⁷ | (2012) | NA |
| Government effectiveness (-2.5 - 2.5) ⁴ | (2013) | 0,90 | Freshwater withdrawals (% of internal resources) ¹ | | 0 |
| Voice and accountability (-2.5 - 2.5) ⁴ | (2013) | 1,05 | Climate change | | |
| Control of corruption (-2.5 - 2.5) ⁴ | (2013) | 0,98 | Electricity production from renewable energy (% total) ¹ | | 0 |
| | | | CO2 emissions (metric tons per capita) ¹ | (2010) | 1,91 |

HFA progress

DISASTER RISK^a

Average Annual Loss (AAL)^b by hazard

| Hazard | Value [million US\$] | AAL/Capital stock [%] | AAL/GFCF [%] | AAL/Social expenditure [%] | AAL/Total reserves [%] | AAL/Gross savings [%] |
|---------------------|----------------------|-----------------------|--------------|----------------------------|------------------------|-----------------------|
| Earthquake | 2,79 | 0,11 | 1,59 | 7,49 | 2,07 | -6,04 |
| Cyclonic Wind | 6,58 | 0,25 | 3,74 | 17,66 | 4,87 | -14,25 |
| Storm Surge | 15,11 | 0,57 | 8,59 | 40,56 | 11,18 | -32,72 |
| Tsunami | 0,01 | 0,00 | 0,01 | 0,03 | 0,01 | -0,02 |
| Volcano | 0,00 | 0,00 | --- | --- | --- | --- |
| Flood ¹⁰ | 0,00 | 0,00 | 0,00 | 0,00 | 0,00 | 0,00 |
| TOTAL | 24 | 0,9 | 13,9 | 65,7 | 18,1 | -53,0 |

Risk and Development Implications¹¹

Economic implications (Capital stock - savings) 41,5

Growth and financial implications (GFCF - Reserves) 72,2

Social Implications (Social expenditure) 73,6

Multihazard AAL results by sector (Earthquake and cyclonic wind)

| Sector | Sub Sector | Capital stock [million US\$] | Average Annual Loss (AAL) [million US\$] | Distribution by sector |
|--|-------------|------------------------------|--|------------------------|
| Residential (income)¹² | Low | 20 | 0,01 | |
| | Middle low | 386 | 1,38 | |
| | Middle high | 615 | 2,27 | |
| | High | 214 | 0,70 | |
| Services | Commercial | 710 | 2,64 | |
| | Industrial | 324 | 1,14 | |
| Education | Private | 51 | 0,10 | |
| | Public | 320 | 1,13 | |
| Health | Private | 2 | 0,00 | |
| | Public | 4 | 0,00 | |
| Public buildings | | 0 | 0,00 | |
| National | | 2.645 | 9,37 | |
| Fiscal¹³ | | 344 | 1,14 | |

Probable Maximum Loss - PML¹⁴ (million US\$)

DISASTER LOSSES¹⁷

NATIONALLY REPORTED LOSSES

Mortality

- Alluvion
- Electric Storm
- Flash Flood
- Avalanche
- Eruption
- Flood
- Earthquake
- Fire
- Forest Fire

Combined economic losses

- Avalanche
- Drought
- Erosion
- Coastal erosion
- Earthquake
- Eruption
- Cyclone
- Electric Storm
- Fire

10-year moving average

2005 - 2013

| | |
|--------------------------|-----------|
| DataCards | 14 |
| Deaths | 2 |
| Houses destroyed | 8 |
| Houses damaged | 428 |
| Combined economic losses | 4.255.254 |

Volcano exposure

| | |
|--|---------|
| Number of volcanoes | 1 |
| Population living within 30km in country (Pop30) | 100.414 |
| % of pop living within 30km | 97 |

- 8 UNISDR Global Risk Assessment 2015. This section is based on technical countries risk profiles : World summarized catastrophe risk profiles: summary by country on the results from the Global Risk Model, CIMNE&INGENIAR (2015).
- 9 AAL: The Average Annual Loss is the expected loss per annum associated to the occurrence of future perils assuming a very long observation timeframe. It considers the damage caused on the exposed elements by small, moderate and extreme events and results a useful and robust metric for risk ranking and comparisons.
- 10 AAL Flood results are provisional. These results give an overview of the risk associated with river flooding. Factors other than the depth of the water also have a considerable influence on loss, which means that there is greater uncertainty compared with other hazards.
- 11 Risk and development implications index. This index is useful to provide a ranking of the countries based on the ratio of the expected Average Annual Loss (AAL) with relation to a set of relevant macroeconomic, financial, and social development variables. It attempts to reveal the weight of the AAL with respect to the social expenditure, the capital formation (domestic investment) and reserves (financial capacity), and the produced capital or capital stock (assets at risk) and savings (treasury) of each country. It reflects, in adverse conditions, growth and social constraints for the country as a result of potential future disasters.
- 12 The fiscal portfolio is composed by the government buildings, public education and health buildings, and low income residential private buildings.
- 13 PML: The Probable Maximum Loss (PML) is a risk metric that represents the maximum loss that could be expected, on average, within a given number of years. PML is widely used to establish limits related to the size of reserves that, for example, insurance companies or a government should have available to buffer losses: the higher the return period, the higher the expected loss. PML always have associated a mean return period.
- 14 Mean return period of 100, 250, 500, 1000 and 1500 years means the 5%, 2%, 1%, 0.5% and 0.3% probability respectively of exceeding those losses in 5 years.
- 15 Residential buildings are classified according to the population by income level, using the GINI curve for income distribution and the countries classification limits from the World Bank. See CIMNE et al. 2013a
