Regional Consultations for Central Asia and South Caucasus on the Post-2015 Framework for Disaster Risk Reduction

1-2 April 2014 / Almaty, Kazakhstan

Summary Report

I. Introduction

As part of the development of a post-2015 framework for disaster risk reduction, the second regional consultation meeting for the Central Asia and South Caucasus countries met for the second time in Almaty, Kazakhstan on 1-2 April 2014. The Governments of Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan and Uzbekistan attended along with disaster risk reduction experts from other stakeholders including international organizations, donors, UN Resident Coordinators, NGOs and civil society. More than 160 representatives attended the consultation (Annex I). UNISDR and the Government of Kazakhstan co-hosted the consultation.

Central Asia and South Caucasus countries experience many hazards and are particularly susceptible to floods and earthquakes. Over a 30-year period from 1980, 14 million people were hit by 131 major disaster events with economic losses of an estimated USD3.8 billion. The major hazards are of regional character, which requires strengthening cross-border coordination and exchange of information on sub-regional and regional level. The countries share the need in education, training, technologies and methodologies in risk and loss assessment, inclusion of all sectors and all population groups and sectors of economy in disaster risk reduction, as well as their protection and building their resilience. Addressing these and other needs and gaps is crucial for ensuring sustainable development of the region and of each of the countries.

A post-2015 framework for disaster risk reduction to be considered at the 3rd UN World Conference on Disaster Risk Reduction in Sendai, Japan on 14-18 March 2015 will help to refocus regional efforts and provide guidance, actions and commitments to reduce risks and build resilience. The consultations for the countries in the Central Asia and South Caucasus region reflected on the existing Hyogo Framework of Action and developed recommendations for consideration as well as volunteer commitments to assist in the implementation of a post-2015 framework for disaster risk reduction.

The two day consultation included one day of thematic and stakeholder consultations that have been prioritized over the last few years in Central Asia and South Caucasus countries including: local governments; risk information; education and training; NGOs and civil society; gender; safe schools and hospitals; regional cooperation; water-related disaster cooperation. The second day focused on statements and commitments from Governments, the thematic groups and the stakeholders. See agenda in Annex II.

This report includes a summary of the recommendations in three areas (overarching messages, general, and specific recommendations). The report also summarizes a set of voluntary commitments that were started at the consultations (and which will require further fine-tuning towards the 3rd UN World Conference on Disaster Risk Reduction in 2015).

II. Summary of Recommendations

Within the two days of consultations a number of results and some overarching messages; ten general recommendations for a post-2015 framework for disaster risk reduction; and a number of specific recommendations on thematic and cross-cutting areas were developed. The recommendations reflect the current priorities of the Central Asia and South Caucasus countries on reducing the risk of disasters and protecting their populations.

A. Overarching Messages

Future generations must have a safer and resilient planet.

Disaster risk reduction is development that builds a safer and more resilient planet.

The integration of disaster risk reduction into the post-2015 development agenda and climate agreements is therefore fundamental for a sustainable future.

B. General Recommendations

1. Develop long term disaster risk reduction and climate adaptation programmes at national and local level. Ensure inclusion of disaster risk reduction approach to overall development programmes and plans.
2. Local level risk management and development of resilient cities should be linked to and harmonized with the national development plans.
3. Risk assessment and the governing of risk should be integral to development planning.

4. Formulate and implement national level policy on disaster risk reduction.
5. Ensure greater coordination of roles and efforts between ministries of emergency situations with other ministries, public authorities, private sector and NGOs at the national and local level.
6. Ensure connection between national level planning, monitoring and review and a post-2015 framework for disaster risk reduction and other relevant international agreements.
7. Further improve and strengthen policies, legal regulations and law in disaster risk reduction.
8. Disseminate knowledge and experience on disaster risk reduction gained from HFA implementation.
9. Engage stakeholders and make special efforts to include media, the business sector and vulnerable families and groups in disaster risk management planning and partnerships.
10. Recognize that recovery is an opportunity to build back better and reduce the vulnerabilities of countries. An internationally agreed framework for cooperation that covers recovery will be useful in assisting disaster-affected nations both in guidance and to help build more capacity.

C. Specific Recommendations

The thematic and stakeholder groups' consultations also provided a number of specific recommendations for consideration for a post-2015 framework for disaster risk reduction. They reflect the work and priorities of disaster risk reduction in Central Asia and South Caucasus.

In the Summary Report, these have been grouped on the specific themes of: information and risk assessment; education and training; safe schools and hospitals. Then there were also a set of cross-cutting recommendations which were evident in many of the consultation reports and statements including around: capacity building; inclusiveness; gender and the role of women; measures for success and accountability (monitoring and indicators); and, regional cooperation.

(i) Information and risk assessment

- Provide access to timely, reliable and objective information on risks and hazards ahead of disasters, as well as life-saving information during and after disasters.
- Take measures for targeted development of coordinated methods/approaches on risk assessment and simulation, application of remote monitoring methods and disasters forecasts, damage and loss analysis with the aim of effective disasters risk management.
- Create specialized programs for risk assessment and information management.
- Promote and ensure collection, analysis and dissemination of sex and age disaggregated data on disaster risks, occurrence, impact and losses at all levels (including in line with the new indicator system on disaster risk reduction).
- Risk and vulnerability assessments to be gender-based and include gender-analysis.
- Use modern technologies for hazard monitoring and early warning of population.

- Provide technical and financial support from the specialized agencies of the United Nations and from the developed countries in the field of remote sensing.
- Establish platforms for information generation and exchange between countries of the Central Asia and South Caucasus region.
- Promote and build partnership with academia and research institutions, to generate solid evidence on climate change and potential disasters and their socio-economic impact.

(ii) Education and training

- Continue to implement the Priority 3 of the current HFA applying systematic approach to build a culture of safety.
- Conduct advocacy for awareness raising on disaster risk reduction, promote DRR in education.
- Design education and training courses, programme development and research on disaster risk reduction for universities, training institutes and centres of excellence. Ensure maximum involvement of scientific and technical institutions in the design.
- Develop and enhance standards/guidance on implementation of disaster risk reduction in educational institutions.
- Share the best practices in education for disaster risk reduction in the countries at risk.
- Conduct education and training courses and programmes on gender equality and women's productive role in DRR and resilience building.
- Promote disaster risk reduction in education through youth, youth networks and high school students, including using the peer education methodology.

(iii) Safe schools and DRR in education

- Implement national programs to ensure structural and non-structural safety of schools. Adapt vulnerability assessment of educational institutions to disaster risks and assessment tools to local contexts;
- Review the building codes to introduce the low cost seismic proof schools;
- Introduce disaster risk reduction in formal and informal education at preschool, basic, vocational, higher and teacher-training levels; use new media tools (youtube, Facebook, etc.) in awareness raising;
- Enhance standards on school-based disaster preparedness and risk reduction (guiding on preparedness plans, simulations exercises, warden/early warning system and disaster management protocols, involvement of children, youth and parents);
- Engage all relevant sectors such as education, emergency, health and nutrition, social protection and welfare, water, sanitation and hygiene and youth to ensure effective and efficient disaster preparedness and management system for schools.

(iv) Health and Health Systems in DRR

- Promote health as a key element of resiliency within communities and stakeholder groups.
- Promote patient rights and equity in health and health care with a strong focus on decreasing vulnerabilities in key groups: gender, age and the disabled.
- Focus on community priorities that protect health: education, health, responsive government.
- Increase efforts to build safety and resilience of hospitals and health systems to assure their continued delivery of health care during crisis.
- Emphasize all-hazard, multi-sector and integrated approaches between Health, Education, Protection and Emergency Services sectors.

(v) Capacity development in disaster risk reduction

- Developed countries to provide technical and/or financial assistance in the application of innovative methods for disaster risk reduction.
- Develop capacities of teachers and professionals responsible for disaster risk reduction.
- Strengthen the potential and capacities of women to be actors and implementers for the post-2015 framework for disaster risk reduction and sustainable development goals.
- Build capacities of people at local level on methods for acting in emergency situations.
- Establish systems and mechanisms for continuous learning and training on DRR for all stakeholders groups.
- Make information on disaster risk management, lessons learned and best practices in disaster preparedness, response, and recovery and risk reduction readily available.

(vi) Inclusiveness and special groups

- Consider the population as a system consisting of various community groups.
- Consider the needs and priorities of special groups, groups with special needs (such as elderly, children, and people with disabilities).
- Take measures for enhancing the capacity and infrastructure improvement in order to reduce exposure and vulnerability of local communities in particular those experiencing the greatest inequality and exclusion.
- Early warning systems should be adapted to children and people with disabilities

(vii) Strengthening the role of women

- Ensure women's participation and representation at all levels of decision-making and coordination processes.
- Ensure harmonization and implementation of the post-2015 framework for disaster risk reduction and the sustainable development goals agenda through harmonization of earlier pledged national commitments for gender equality and women's empowerment (such as Beijing Action Plan, CEDAW).
- Integrate gender perspectives in all national policies and plans on disaster risk reduction.
- Introduce measures to ensure prevention of discrimination and violence on women and girls in order to reduce risk and vulnerabilities in the context of disaster risk reduction.

- Develop plan of action aimed at inclusion of gender and reproductive health in national contingency plans with focus on the “Strategy for Minimal initial service package for protection of reproductive health”.

(viii) Regional cooperation

- Enhance the sub-regional cooperation to fill the gaps in information and knowledge by bringing greater synergy and collaboration among the existing sub-regional cooperation arrangements already in place to address the trans-boundary zones of high seismic activity, flooding, GLOF, and drought.
- Take measures on development of national and regional targeted programs aimed at creation of concerted approaches for inter-sector interactions and regional cooperation on water issues, water related disasters.
- Introduce measures to build regional cooperation on interconnected issues essential for sustainable development such as: food and energy security, gender equality; sanitation and hygiene; adaptation to climate change; border cooperation; and peace building.
- More concerted efforts should be made to strengthen the institutional capacity of sub-regional/regional institutions and deepen the political commitments for making the existing sub-regional cooperation arrangements more effective.
- Cooperation between National Platforms for Disaster Risk Reduction on regional and global levels should be supported and strengthened
- More resources should be made available to support disaster risk reduction activities

(ix) Measures for success and accountability (monitoring and indicators)

- Ensure better monitoring and implementation of recommendations and state decisions with clear indicators for disaster risk reduction and sustainable development goals.
- Support the development of clear and measurable indicators reflecting integration of disaster risk reduction into education policies.
- Include gender-sensitive indicators to monitor and track progress.
- Increase the accountability of countries for implementation of international commitments on gender equality through gender mainstreaming into national policies, strategies and plans for sustainable development and disaster risk reduction.

III. Summary of Volunteer Commitments

The volunteer commitments below were extracted from government statements and the consultations on the themes and stakeholders during the meeting. Many of the commitments require further clarification in terms of who, when and the inclusion of some performance benchmarks of the commitments. The region, under the guidance of the UNISDR secretariat, will continue to work with stakeholders to fine-tune commitments for the region to implement and present to the 3rd UN World Conference on Disaster Risk Reduction in March 2015.

We, the participants of the Central Asia and South Caucasus Regional Consultation Meeting on a Post-2015 Framework for Disaster Risk Reduction, commit to...

- Join our efforts to provide the future generations with a safer and resilient planet.
- Raise awareness on progress and effective implementation of practical measures outlined in post-2015 framework for disaster risk reduction to achieve greater security and stability in our countries and the world as a whole.
- Actively engage government agencies and structures in the Central Asia and South Caucasus region to support and contribute to the development and implementation of the post-2015 framework for disaster risk reduction.
- Work towards greater regional cooperation for information sharing on common regional challenges of disaster risk reduction and resilience building.
- Be ready for the post-2015 framework for disaster risk reduction and give our full support for continued cooperation with UNISDR.
- Ensure harmonization and implementation of the post-2015 framework for disaster risk reduction and sustainable development goals through harmonization of earlier pledged national commitments for gender equality.
- Be more actively engaged in development of long-term disaster risk reduction and development, programmes and national plans.
- Include and/or integrate disaster risk reduction into development plans for cities, municipalities and local governments.
- Provide support and contribute to the development and effective implementation of the post-2015 framework for disaster risk reduction at national and local levels.
- Effectively organize and conduct regular disaster risk reduction education and capacity development programmes and events for the people, government officials and specialists both at national and at local level and set up an effective system for professional education for all stakeholders.
- Support establishment of effective disaster risk reduction volunteer movement and training mechanism for the volunteers.
- Promote education, school safety and public awareness in post-2015 framework for disaster risk reduction.
- Mainstream and scale up education policies and plans related to disaster risk reduction.
- Support implementation through integration of disaster risk reduction into national and sector policies and standards to achieve gender equality through conducting education and training courses and programmes.

- Support gender related aspects and the potential role of women as main actors in the implementation of a post-2015 framework for disaster risk reduction.
- Disseminate and share information on a post-2015 framework for disaster risk reduction among the youth.
- Greater allocation and public investments aimed at reducing water-related disasters.
- Support the development and implementation of the post-2015 framework for disaster risk reduction and actively participate at the 3rd World Conference in 2015.
- Confirm and commit our full support for continued fruitful cooperation with UNISDR as guardian of the post-2015 framework for disaster risk reduction.
- Support and personally contribute to the implementation of the agreed proposals and the recommendations we have made and presented at this conference to be considered for development and shaping of the post-2015 framework for disaster risk reduction.

IV. Acknowledgments

The Central Asia and South Caucasus consultations on a post-2015 framework for disaster risk reduction held in Almaty, Kazakhstan from 1 to 2 April 2014 was kindly supported by USAID/OFDA, Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH, Swiss Agency for Development and Cooperation, as well as inputs and contributions from UN agencies, including UNDP, UNFPA, UNICEF, UNOCHA, and UN Women.
