

A notebook like an umbrella

This is a strange kind of notebook: it's not just something to read and learn from:

It also serves for exploring, and for protecting.

Because nature has a thousand ways of enchanting, amazing or terrorizing.

Often we blame nature for disasters, forgetting that we are guests, along with others of this mistreated planet.

Events such as hurricanes, floods, and EARTHQUAKES become catastrophes only when human beings do not use their brains and their sophisticated technologies to respect nature's cycle, but to control and exploit it instead.

If we live in a place where it rains very often, we will keep within reach something to shelter us, an umbrella, a raincoat; or at worst, we know that we are going to get wet.

But strange to say, with earthquakes many people think they can behave differently.

As if they had rather catch cold than bring an umbrella with them.

This notebook is designed to be used as an umbrella: to know whether it rains often, to be ready when it does rain, and to make sure that the rain falls without causing too much damage.

Romano Camassi and Laura Peruzza

Original title: A lezione di terremoto

Editorial Project: M. Cristina Zannoner, Rita Brugnara, Roberto Luciani

Managing Editor: Rita Brugnara

Coordination and supervision for the EDURISK project: Romano Camassi, Laura Peruzza

Texts: Roberto Luciani

Illustrations: Roberto Luciani

Graphics and page format: Carlo Boschi

Editing: Morgana Clinto
