

International course

Climate change adaptation in food security & natural resource management

Integrating climate change in sustainable development

Uganda, 30 January - 10 February 2017

Climate change is a fact But if you plan for it, adaptation to climate change is possible. This requires strategic thinking by you and your organisation. This course enables you to become familiar with strategic planning for climate change adaptation.

Why adapt to climate change? Without appropriate responses climate change is likely to constrain economic development and poverty reduction efforts. Countries with economies rooted in climate sensitive sectors such as agriculture, fisheries and forestry are expected to be hit hardest. This will be true for many countries in the South. Climate change is both a global environment and a local development issue, as it could jeopardise the livelihoods of millions. This is particularly so where communities are already vulnerable to changes and have limited coping capacity. Well-designed adaptation strategies can offer ways out. Adaptation processes do not stand alone, they are part of climate resilience approaches. Climate resilience is the capacity of a person or system to maintain its role, purpose and integrity in the face of dramatically changed circumstances. It is the ability of a (social or ecological) system to absorb disturbances while retaining the same basic structure and ways of functioning, the capacity for self-organisation, and the capacity to adapt to stress and change. In the face of climate change this capacity needs to be reinforced, at local level but also at higher levels such as the landscape level.

You can become involved Climate change is a hot public and political topic but receives limited reaction of policy makers. While climate change negotiations take place in the international arena, there is often limited knowledge and understanding of climate change adaptation concepts and its implications at local level. All

Fee:	3,500 Euro
Deadline subscription:	19 December 2016
Deadline NFP fellowships:	19 July 2016

countries develop adaptation strategies which are aimed at climate change adaptation for the medium to long-term. The formulation of climate change adaptation projects, covering urgent and immediate needs, is done by most least-developed countries (LDCs) by preparing National Adaptation Programmes for Action (NAPAs). Many economically more developed countries also prepare adaptation programmes or strategies. Often projects formulated under such programmes or

strategies focus on technical issues and not on the institutional and organisational capacities that should be in place to implement possible adaptation strategies. Adaptation means also change in attitude, skills and mind-set. The translation of the policy documents on climate change into climate adaptation strategies is something that you as a professional can contribute to.

Practitioners in agriculture & natural resource management Participants of this course will obtain full understanding of climate change adaptation concepts. But beyond the science of climate change adaptation, this course will translate policy documents and research findings into adaptation strategies and strategies to improve resilience.

Participants of this course will be able to effectively and meaningfully contribute to the debate on climate change adaptation, either in the policy process, research to fuel the debate, or implementing climate smart policies. This will strengthen their positions on the basis of newly acquired concepts, skills and methodologies. Participants with an interest to take climate change adaptations further than the paper they are written on, are encouraged to apply. Apart from practitioners in the agriculture and natural resource management sectors, among participants in past courses we also welcomed a journalist, a bank official and a staff member of a company.

Hot spots for climate change A hot spot for climate change is an 'area' that is already vulnerable and is likely to suffer substantial impacts as a result of climate change. How to design adaptation strategies for these hot spots is part of the group work based on participants cases. There is particular attention for increasing resilience in the hotspot. The results are well thought out proposals for climate change adaptation which you can apply in your work situation back home.

What will be covered in the course?

- understanding climate change (concepts such as adaptation and mitigation, causes and risks) and implications for food security, agriculture and natural resource management;
- concepts and assessment of vulnerability, resilience, coping strategies and sustainable development processes;
- climate smart agriculture and natural resource management;
- examples of adaptation strategies to climate change;
- policy making processes, advocacy and

integrating climate change issues into existing policy processes and rural development strategies.

This course uses interactive training methods. Topics are dealt with in a combination of lectures, plenary and group work, study assignments and role plays. Experiences and case studies of participants are the entry point for interaction. The course includes field work in the rural area of South-Uganda, and interaction with policy makers and researchers to discuss and refine strategies for climate smart agriculture and natural resource management. It also includes the preparation of a personal action plan to integrate your new knowledge and skills into your daily work at home.

Further practical information

- **Application**, the procedure is:
 - 1) Apply at the website of CDI, Wageningen**
UR: www.wageningenur.nl/cdi. You will receive a confirmation and more information within a week. Early application is recommended as some procedures to finalise subscription (e.g. funding, visa) can take some time.
 - 2) CDI** is unable to assist you in obtaining financial support, however if you want to apply for a **NFP Fellowship**, CDI will provide you with the full instructions and the web address for registration in **ATLAS**. ATLAS is the online application form for an NFP Fellowship. You can check the eligibility at www.nuffic.nl/nfp. A limited number of scholarships is available. As this application process takes time and requires several documents, we recommend that you **start as soon as possible**.
- **NFP Fellowships include** travel and full board and lodging.
- **Fee** includes all course related costs (materials, excursions, administration).
- Participants will be awarded with a **Certificate of attendance**. The programme of the course might be changed to incorporate new insights.

Proven concepts & state-of-the-art science and methodology For an overview of all the courses visit our website: www.wageningenur.nl/cdi. More than 20,000 participants have gained access to the latest insights from research and best practices.
