

Webinar: Latest news from space – who and what is looking down on us? – ask the experts!

Description

Last year we hosted a live Q/A session for Danish authorities and private stakeholders, and this year, due to popular demand, we will follow up with this, our very first, live Q/A session targeting a global audience. In this webinar you will get an opportunity to get answers to all your unanswered questions about Very High Resolution (VHR) satellite data. What satellites are out there in space? What can they do? When do they pass by above us? What does the data cost? – this, and much more, you will get answers to in this QA session.

So much is going on in space these years, so before we open the floor for all your questions, you will be equipped with the latest information about data types, development and application opportunities when our expert, Rasmus Borgstrøm, presents the ‘Latest news from Space’ for the first 10 minutes. Did you know, for example:

- That today it is possible to record videos from space?
- That modern satellite sensors can take high resolution images day and night and through cloud cover?
- That microsatellite constellations will make it possible to acquire new imagery from the same area of interest every hour?

All this you will get to know much more about, but if you can’t wait, you can already learn more about satellites and application potential on <http://satellites.dk/>.

After the introduction you will get the opportunity to ask ALL your questions when our two passionate satellite data experts, Rasmus Borgstrøm and Mikkel Lydholm Rasmussen, will be ready to answer your questions for half an hour.

Why should I participate?

- Generally, because you are interested in modern satellite technology and satellite data and would like to know more.
- Because Covid-19 related travel bans and restrictions have prevented you from overseeing your projects at home and abroad and you want to know more about how satellite data can be used as a cost-effective alternative to onsite activities.
- Because you work on a research project and need to be equipped with the latest knowledge about available satellite data types, level of details and cost aspects over your project site.
- Because you want to know more about how VHR data can be used as a cost-effective means to monitor and oversight building projects and construction work.

The Q/A session will take place on February 11, 2021, from 10:00 – 10:45 CET. Sign up now through the link below.
